

## Accessory Product sheet: Brushed Cable Grommet

### PROJECT

### APPLICATION

Penetrations under Racks

### ACCESS FLOOR

High Pressure Laminate (HPL)  
panel application

### DESCRIPTION OF TASMAN BRUSHED CABLE GROMMET

The Tasman brushed cable grommet fits into the access floor panel to provide a safe, neat and effective outlet for electrical power leads, telecom cables & data cables. The brushed cable grommet fits all Tasman access floor panels and is quick and easy to install, easy to use during servicing and manufactured from a very durable plastic.

The brushed cable grommet can be installed within all Tasman access floor panels whether in a carpeted panel application or more commonly in high pressure laminate panel application.

### TASMAN'S BRUSHED CABLE GROMMET

Tasman's stock is a standard 200mm x 130mm (internal grommet opening)

### COLOUR

Tasman's stock cable grommet is available in black.

### DESIGN

The grommet is designed for heavy duty use as it is manufactured from a very durable ABS plastic. The grommet incorporates a smart and simple design. The plastic body extends through the panel to protect the cables, and the brushes act to seal around cables penetrating the floor. The brushes also helps maintain A/C pressure beneath the access floor helping to eliminate hot spots around the data centre.

### FACTORY PRE- CUT PANELS

Tasman panels can be supplied with specific apertures cut out in the panel ready to accept the brushed cable grommet. Simply by detailing the penetration and its relative position, cutting & installing the grommet, the panel can be manufactured ready to use on-site.
