

Accessory Product sheet: Cable Grommet

PROJECT

APPLICATION

All Tasman Access Floor Panels

ACCESS FLOOR

Carpeted panel application or high pressure laminate panel application

DESCRIPTION OF TASMAN CABLE GROMMET

The Tasman cable grommet fits into the access floor panel to provide a safe, neat and effective outlet for electrical power leads, telecom cables, data cables and vacuum hoses. The cable grommet fits all Tasman access floor panels and is quick and easy to install, easy to use during servicing and manufactured from a very durable plastic.

The cable grommet can be installed within all Tasman access floor panels whether in a carpeted panel application or a high pressure laminate panel application.

TASMAN'S CABLE GROMMET

Tasman's stock cable grommet fits into a 127mm diameter hole in the access floor panel.

COLOUR

Tasman's stock cable grommet is available in black.

DESIGN

The grommet is designed for heavy duty use as it is manufactured from a very durable ABS plastic. The grommet incorporates a smart and simple design. The plastic body extends through the panel to protect the cables, and a 'snap-lock' removable/sliding lid covers the top surface to provide a neat and secure finish.

USEABILITY

The two pieces forming the 'sliding lid' open or close to create a tight seal around the floor cables. This reduces the likelihood of objects falling through the access floor into the underfloor plenum. The 'snap-lock' sliding lid can be completely removed for easy access to the underfloor plenum and cables.

FACTORY PRE- CUT PANELS

Tasman panels can be supplied with specific apertures cut out in the panel ready to accept the cable grommet. Simply by detailing the 127mm diameter aperture and its relative position, the panel can be manufactured ready to use on-site.
