SPECIFICATION DETAILS:

CARPET TILE SIZE:

600mm x 600mm (Nominal)

DESCRIPTION OF TASMAN ONGRID™ 60CM MODULAR CARPET TILE SYSTEM

The Tasman OnGrid™ 60cm Modular Carpet Tile System produces a synchronised fit between carpet tile and access floor panel. The carpet tiles are accurately cut 600mm x 600mm to exactly match the access floor grid. Using the Tasman OnGrid System reduces time, waste and hassle for normal underfloor access and subsequent churn.

The OnGrid™ System secures the carpet tile to the panel to create a very stable surface. OnGrid™ is designed specifically for use with 'bare' surface finish Tascor® Access Floor Systems.

There are several user friendly and cost effective benefits for selecting Tasman OnGrid™ to provide the decorative surface finish for your access floor.

MATCHING FIT

OnGrid™ carpet modules are precision cut to match the 600mm x 600mm Tasman access floor panel and grid. This allows for completely interchangeable carpet tiles and provides quick and easy access to the underfloor plenum.

SECURE GRIP

The Tasman OnGrid™ System creates a secure grip between the carpet tile and access floor panel. This is achieved by precision matching four locating buttons, attached to the underside carpet tile, to four holes in the access floor panel. When affixed to the access floor panel, the Tasman OnGrid™ System will hold the carpet tile securely in position and create a very stable floor covering.

The button location system enables the carpet tile to be fitted without glues or adhesives, providing a more sustainable user benefit.

COST EFFECTIVE

The Tasman OnGrid™ System is cost effective because it creates easy underfloor access and incorporates interchangeable panels.

FAST AND EASY UNDERFLOOR ACCESS

Removing only one carpet tile per panel provides quick and easy access to underfloor services, removing time and expense from the process.

INTERCHANGEABLE CARPET TILES

Using Tasman OnGrid™ means the carpet tiles are interchangeable and able to be re-positioned around the access floor. This is a cost effective way to re-use carpet tiles from other floor locations.

VERSATILE APPEARANCE OPTIONS

There is a massive range of colours and patterns available, or develop your own design to fit your interior colour scheme. The options are endless, making the Tasman OnGrid™ System extremely versatile to specify. OnGrid™ 60cm modular carpet tiles are available from Australia's two leading modular carpet tile manufacturers – Ontera and Interface.

NO WASTE

Carpet tile waste is eliminated when service outlets within access floor panels are relocated because each OnGrid™ Carpet Tile can follow the panel to its new location.

PARTIAL INSTALLATION POSSIBLE

The matching fit of Tasman OnGrid™ to panel allows the OnGrid™ Carpet Tile to be installed under partitions on a partial basis. This leaves the rest of the access floor to remain uncarpeted for tradespeople to complete interior work without damaging or soiling the installed carpet.

IDEAL FOR USE WITH UNDERFLOOR AIR

The Tasman OnGrid™ System is ideal for use with underfloor air conditioning systems. Because each OnGrid™ Carpet Tile matches the access floor grid, this enables easy access to underfloor services and allows panels to be relocated with air service outlets attached to them.
